

Sustainable Technology

Diego Calvo Estaun : 2-3 minutes : 5/27/2024

Sustainable Technology

From user devices to data centers and networks, the technology powering business today has a significantly high carbon footprint, and its energy consumption is expected to increase three-fold from 2010 to 2025. With the explosion of data & AI in addition to technological advances, more and more resources are required to power the business.

As a Leader in The Forrester Wave™: IT Sustainability Service Providers, Q3 2023, we enable your IT department to champion sustainability through both Green IT and IT for Green initiatives that reduce the digital and technological impact, embrace sustainable technologies, improve services and employee experiences, and spark culture change by engaging IT and employees alike, all while measuring your progress and its impact.
